Mahir Nimeshkumar Panchal

Ahmedabad, Gujarat, India
+91-9328075210 | mahirnp2005@gmail.com | LinkedIn

Professional Summary

Computer Engineering student with strong foundations in Data Structures, Algorithms, DBMS, and Full-Stack Development. Active competitive programmer with growing expertise in AI/ML-based applications and backend system design. Interested in building scalable software solutions and contributing effectively in software engineering roles.

Education

Pandit Deendayal Energy University, Gandhinagar, Gujarat — **Expected June 2027**
Bachelor of Technology in Computer Engineering — CPI: **8.75**

Divine Buds English School — **2023**
Class XII — Percentage: **76.92%**

Divine Buds English School — **2021**
Class X — Percentage: **87.5%**

Technical Skills

- **Programming Languages:** C, C++, Python, Java, SQL, JavaScript
- **Web Development:** HTML, CSS, MERN-Stack Development
- **Core Concepts:** Data Structures and Algorithms, DBMS, OOP
- **Tools:** Git, GitHub
- **Competitive Programming:** Codeforces (**1178**)
- **AI/ML:** Applied Machine Learning, Model Development

Projects

AI-Assisted Pull Request Review Platform — GitHub

- Developed a full-stack AI-assisted pull request review platform enabling repository management, PR creation, and automated review workflows.
- Designed and implemented a scalable backend using Node.js, Express.js, MongoDB (Mongoose), and JWT-based authentication with modular MVC architecture.
- Built an interactive frontend using React.js for managing repositories, pull requests, and real-time review feedback.
- Integrated AI-based review simulation with scoring, approval/rejection logic, and automated merge decision handling.
- Implemented RESTful APIs, role-based access concepts, and structured error handling for production-level reliability.

Burnout Prediction Using Machine Learning — GitHub

- Developed a machine learning-based predictive system to identify burnout levels using multi-factor psychological and behavioral datasets.
- Performed data preprocessing, feature engineering, and exploratory data analysis to extract meaningful patterns affecting stress and burnout.
- Implemented and evaluated multiple ML models to improve prediction accuracy and reliability.
- Applied model evaluation techniques and optimization strategies to enhance performance and generalization.
- Designed the project with a research-oriented approach, aiming to contribute towards academic publication and real-world mental health analysis.

Hybrid ML Internship Recommendation Engine (SIH 2025)

- Built a hybrid recommendation system for the SIH 2025 problem to improve internship matching on the PMIS portal.
- Combined content-based and collaborative filtering to generate personalized internship suggestions.
- Implemented skill-based matching and ranking to improve relevance and user experience.

Experience and Leadership

Content & Documentation Head, Symmetry, PDEU

- Managed structured documentation and coordinated content workflows for club events and activities.
- Supported communication, reporting, and documentation processes across multiple initiatives.

Certifications

- AWS Cloud Practitioner Essentials
- Google Foundations of Cybersecurity (Coursera)
